

We have worked for a range of blue-chip clients in the banking, telecoms, manufacturing and utility sectors – from ad hoc assignments to long-term support contracts.

Our Clients

We have supplied services and products to many major UK companies and public bodies, in a number of sectors. Some of these have been major projects involving a sizeable team and extending over many weeks or months: in other cases we have carried out small, *ad hoc* pieces of work to meet immediate customer needs.

Our clients include Aberdeen Asset Management, ACL, Acordis, Anglian Home Improvements, Bank of Scotland, Cable & Wireless, CIS, Crown Agents, EDS, Equitas, Financial Times, Flemings, Hewlett-Packard, HSBC, Inmarsat, Irish Permanent, ISS, Lazard, Ministry of Defence, Mizuho, Nationwide Building Society, NM Rothschild, Newcastle Building Society, One2One, Orange, Rover, Saudi International Bank, Schrodgers, Sogei, Treasury Solicitors, UBC Media and West Merchant Bank.

From our base in London, we have worked for clients in France, Switzerland, Spain, Ireland, Belgium, Italy, Poland, Japan and Singapore as well as the UK.

Some Recent Projects

A mobile phone company had us carry out a full review of network security, including firewalls, modems found by phone number scans, the internal network and PBXs. This covered all the company's UK sites and many thousands of user desktop systems.

We have a long-term contract with another mobile operator to provide a managed service for the maintenance of its intrusion detection systems. These cover networks across the company and protect customer-facing services as well as the enterprise itself: the technology supported contains both ISS RealSecure and Proventia and Enterasys Dragon products.

IDsec supplied a complete event management system for one of the UK's largest electricity producers. This was based on Network Intelligence enVision appliances and allows the client's security team to integrate, analyse and archive alerts from a wide range of hosts, devices and applications – providing compliance at the sharp end. We have been involved with the project from initial product evaluation through installation, training and support.

We have supplied ISS products to one of the largest building societies, training staff and helping with deployment and configuration.

A leading international telecommunications operator used IDsec to test its hosted firewall service as part of the assurance provided to its own clients.

We tested the security of head-office and branch Internet gateways across the world for a leading merchant bank.

An EC government finance ministry had us provide risk assessment for an e-commerce gateway.

Feel Good About Your Network

IDsec is an independent company specialising in network security. We can assess your security and advise on long-term protection; as we have for a range of blue-chip clients since 1997.
