

IDsec now offers the world's most popular and secure enterprise authentication solution. SecurID gives users a brand new password every 60 seconds.

IT managers are coming under a lot of pressure to provide two-factor authentication, driven by compliance and other regulatory moves in both the private and public sectors. The first factor – “something you know” – is the familiar system password, but setting up the second – “something you have” – takes real effort. Although this is nominally a security issue, the current economic climate means that there are genuine business concerns. An implementation needs to have a small footprint, avoid major user disruption, minimise cost and keep a tight rein on support overheads.

Proven Technology

RSA's SecurID tokens are very well established in the market, with millions of users and a 20-year development history.

The Security Division of EMC

Part of their success is the simplicity of the underlying approach: every 60 seconds the token produces a new, unpredictable numeric code that can be checked by the login process against an authentication server. This provides strong network security, and RSA's implementation has proved reliable and convenient for users.

User Convenience

In fact, recent product developments have provided a wide range of form factors so that IT managers can roll out the type of authenticator that is most suited to their users.

In addition to the original credit card sized unit, there are now SecurID key fobs, USB sticks and software tokens for smart phones such as Blackberry, Windows Mobile and Symbian devices. IDsec can help you set up strong authentication using SecurID with the minimum of disruption, and integrate it with other security systems, including RSA's security event manager, enVision.

About RSA

RSA, the Security Division of EMC, is the premier provider of security solutions for business acceleration. As the chosen security partner of more than 90% of the Fortune 500, it helps the world's leading organizations succeed by solving their most complex and sensitive security challenges.

Feel Good About Your Network

IDsec is an independent company specialising in network security. We can assess your security and advise on long-term protection: as we have for a range of blue-chip clients since 1997.
