

Maintaining network security systems such as firewalls and intrusion protection is a specialist task: our managed service allows you to concentrate on policy and development.

Full Coverage

Our managed services cover all types of active security systems, including:

- **IDS and IPS:** intrusion detection and protection systems from all vendors
- **firewalls:** perimeter protection appliances, both corporate and remote
- **event management:** security event log handling and storage

Tailored Services

We recognise that the level of support provided to a customer has to be appropriate to the importance of the systems covered by the contact.

Our service can be tailored to meet real business needs, including the hours covered, response times and escalation.

Track Record

We have a long-term contract with a mobile phone operator to provide a managed service for the maintenance of its intrusion detection systems. The equipment supported contains both ISS RealSecure and Proventia and Enterasys Dragon products, with a mixture of systems installed by us and other integrators.

IDsec is currently supporting an event management system for one of the UK's largest electricity producers. This is based on RSA enVision appliances and our service covers all aspects of system operation.

Feel Good About Your Network

IDsec is an independent company specialising in network security. We can assess your security and advise on long-term protection: as we have for a range of blue-chip clients since 1997.
