

IDsec has provided network security services to blue-chip customers in all sectors since 1997.

Audit and Penetration Testing

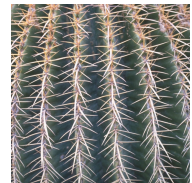

Our services cover all the entry points that an intruder can exploit when trying to break in to a network, and we use an established methodology to make sure the findings are of immediate benefit to our clients.

- **Networks:** including external probing from the Internet, on-site DMZ testing and full internal network audits
- **Web Applications:** both external testing of existing sites and support during development
- **Phone Systems:** detection of unauthorised modems that may by-pass the firewall

Intrusion Protection

Both IDS and IPS products need careful configuration and dedicated support to get the best out of them. They are unlikely to produce any real business benefits if used straight from the box, and may even give a false sense of security.

- **Product Selection:** providing an appropriate solution for organisations of all sizes
- **Deployment:** we have from initial installation through to fine tuning and configuration
- **Staffing and Support:** we can help you fit an IDS or IPS into the existing operational set-up

Managed Services

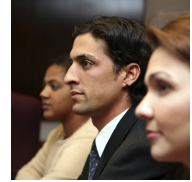

IDsec can take on the day-to-day running of your network security systems, from a single firewall to a whole network of intrusion detection systems. We provide tailored managed support contracts – for existing customer systems as well as new systems installed by us.

Maintaining network security systems such as firewalls and intrusion protection is a specialist task, and our managed service allows you to concentrate on policy and development.

The level of support in a managed service contract can be arranged to match the customer's business requirements, in-house expertise and – most importantly – available budget.

IDsec offers a range of training courses that allow users to get the most out of security products. This includes a number of industry standards as well as products supplied by us.

In partnership with Computerlinks, we can provide both introductory courses and more advanced tuition: many of these courses lead to vendor accreditation.

Products covered include Blue Coat, Check Point, Crossbeam, IBM Internet Security Systems (ISS), Juniper, Nokia, Packeteer, Tripwire and Websense. Courses normally take place in central London.

Security consultancy from IDsec covers a whole range of activities in support of general and technical management. We offer the benefits of many years' experience in designing, building and maintaining secure systems.

- **Policy Development:** making sure that activities and mechanisms are tied to business requirements
- **Incident Handling:** *ad hoc* support to tackle suspected breaches and other emergencies
- **Management Support:** skilled staff for short or long term cover

Feel Good About Your Network

IDsec is an independent company specialising in network security. We can assess your security and advise on long-term protection: as we have for a range of blue-chip clients since 1997.
